

For Immediate Release:

OIL SPILL CONTAINMENT

MARBOOM Corporation, St. Petersburg, Florida, USA, has launched an internationally patented oil spill containment boom and protection boom system called MARBOOM.

Hans Claesson, President and Inventor developed the MARBOOM "FIRST Response". It all started for Hans during the 1993 oil spill in Tampa Bay, where he saw an obvious need for an inexpensive, easy deployment practical and environmentally friendly oil spill containment boom, hence the MARBOOM was born and the slogan: **"The yellow boom that's green"**, as all material used in the boom and packaging units are 100% recyclable.

Unlike most other containment booms, MARBOOM is inflatable through one single integrated air distribution channel by using a standard leaf blower or other air source, rapidly filling the entire boom length providing for quick and easy deployment from land or a vessel.

The cost of the MARBOOM alone, is much less than the labor intensive cleaning expenses of traditionally booms of equivalent size, making it cost effective to use a new MARBOOM each time due to its low price.

The small packaging volumes of MARBOOM makes shipping and storage cost exceptionally low. For example: 2500 ft. of MARBOOM takes up the space 48"x 40"x 42" pallet box and weighs only approximate 1500 lbs., which easily can be kept onboard a vessel.
